SIEMENS

Earth Station High Power TWT's Performing Reliably for more than 10.000 hours

Ours. For power levels between 5 and 12 kW.
This is why Siemens TWT's are specified for so many earth stations.
Still slightly ahead of the others. The latest TWT from Siemens is a state-of-the-art 1.5 kW **helix** tube with just the features you are looking for: low voltage (less than 10 kV!), all air cooling, exceptionally high linearity, coupled with the reliability of Siemens tubes. Ideal for most Intelsat IV earth stations.
Call for details of Siemens earth station IPA and HPA TWT's to DK 5 ZD.

Typical Siemens tubes
